control functions

All models are controllable by touching one of the tiges; the one closest to the blue light of the lamp.
A short press will light ON, a second short press will light OFF and a long press will dimm up and down the brightness. If the press will be too long, a short blinking of light will advise that the brightness is at the maximum or at the minimum potential.

All models born with a quick ON-OFF mode and DIMM from 5% to 100% but it is possible to customize these models, You can find other ones inside the OPTIONAL MODES table.

mode

ON		OFF		DIMMER	
Soft	Fast	Soft	Fast	5% - 100%	Step 5% 25% 50% ...
